IN THE CLAIMS

Please replace pending claims 1 and 18 with below amended claims 1 and 18 as follows:

1.   (Twice Amended) A method for operating plural computers displayed on a display device having at least a first window that displays information from a main computer and a second window that displays information from a remote computer, comprising:

controlling data from the main computer and the remote computer with an input device associated with one of the computers; and

manipulating and sharing data displayed on the display device between the first window of the main computer and a picture within a picture window of the second window of the remote computer through a common memory buffer.

18.   (Twice Amended) A method of editing data between first and second computer systems, the data from the first and second computer systems being displayed on one monitor, the method comprising:

connecting the monitor to the first computer system;

connecting the monitor to the second computer system;

displaying a first window with data from the first computer and a second window with data from the second computer; and

editing and sharing data between the first window of the first computer system and a picture within a picture window of the second window of the second computer system through a common memory buffer.
